MRUTYUNJAYA

Application Support Analyst

mrutyunjaymath05@gmail.com | 7013202713 | Mumbai

Professional Summary

- Working as Production, Application Support Analyst & Maintenance Engineer.
- 5 years proven working experience in an application support, maintenance and Implementation
- Very good SQL, Java, PL/SQL, UNIX, Shell Scripting knowledge
- Writing Queries using Oracle PL/SQL in Windows and UNIX Platforms
- Job Scheduling Using Autosys (Control-M & CA toll-CAWA)
- Experience in working PROD support
- Managing production issues through research/analysis, troubleshooting, phone conversations, email, Instant Messenger chat, Remedy ticketing system, or face-to-face conversations.
- Clear and concise written and spoken communications in the form of Remedy tickets, emails, analysis, process/procedures, meetings, conference bridges and internal/external phone calls.
- Perform day-to-day operations, administration and maintenance activities in support of the application
- Understanding and monitoring Tickets.

Technical Skills

Operating Systems
Linux, Unix, Windows.

Cloud Platform
AWS (Amazon Web Services), PCF

Job Scheduling
Autosys, Control-M, Crontab, TWS

Other Utilities
Putty, SSH, WinSCP

Monitoring Tools
Splunk, Grafana, ITRS, Postman, AppDynamics, Dynatrace

Ticketing Tools
ServiceNow, JIRA

Web/Application Servers
Apache, Tomcat, WebSphere and WebLogic

Containerization & Orchestration
Docker, Kubernetes

Scripting & Languages
SQL, PLSQL, Shell Scripting, Python, Java

Databases
Oracle, MySQL, MSSQL

Education Info

Graduation

Gulbarga University

Intermediate

C B PU college

G H school

Experience

Quess Corp Limited Feb 2024 – Aug 2026
Application Support Analyst

Project: Jio Payment | **Client:** Reliance

Description:

The Jio Payment project focuses on supporting and maintaining payment-related applications and services that enable secure, reliable, and seamless digital payment transactions. The project involves monitoring payment processing systems, troubleshooting application and transaction failures, analyzing logs and database records, and ensuring the availability and performance of payment services. The support team handles production incidents, batch job failures, transaction discrepancies, and payment processing issues while adhering to SLA requirements. The team also coordinates with development, database, infrastructure, and business teams to perform root cause analysis, implement corrective actions, and maintain smooth 24/7 production operations.

Key Skills: Linux, Oracle, SQL, Shell Scripting, AWS Cloud, Grafana, Splunk, ServiceNow, Control-M, Git

Roles & Responsibilities:

- Provided L1/L2 application and production support for business-critical retail POS applications handling customer billing and electronic payment transactions.
- Monitored POS application health, transaction flows, and payment processing activities to ensure smooth business operations.
- Investigated failed, pending, and duplicate payment transactions by analyzing application logs, database records, and transaction status details.
- Troubleshot application errors, payment gateway connectivity issues, transaction timeouts, and billing discrepancies.
- Executed SQL queries to validate transaction records, investigate data inconsistencies, and support production issue resolution.
- Monitored application alerts and proactively identified potential issues affecting POS availability and payment processing.
- Managed incidents and service requests through ITSM tools, ensuring timely resolution in accordance with defined SLAs.
- Performed root cause analysis (RCA) for recurring application failures and payment-related incidents and coordinated corrective actions with relevant teams.
- Collaborated with development, database, infrastructure, network, and payment teams to resolve complex production issues.
- Participated in incident bridge calls and provided regular updates to stakeholders regarding business impact, investigation progress, and service restoration.
- Validated application functionality and payment transaction status after incident resolution, deployments, and maintenance activities.
- Supported incident prioritization based on business impact, urgency, and transaction criticality, escalating high-priority issues when required.
- Prepared incident reports, troubleshooting documentation, knowledge base articles, and shift handover notes to improve support efficiency.
- Followed ITIL processes for incident, problem, and change management while maintaining compliance with operational procedures.
- Supported 24/7 production operations to maintain application availability, transaction accuracy, and business continuity.

TECH NEON SOLUTIONS PVT LTD Jul 2021 – Feb 2024

Support Engineer

Project: Crowdcube | **Client:** Bank of Montreal

Description:

Crowdcube project is one of the prestigious project for the Bank of Montreal, which includes OCR & C2P related to imaging application, which will help users to capture the information that is being scanned and capture important based on the docs scanned that will help on the information from the scanned prints to identify the persons background who have involved in transactions to check if the person has any illegal identity.

Roles & Responsibilities:

- Provided L2 Production and Application Support for global clients, ensuring high application availability and resolution of production issues within defined SLAs and KPIs.
- Monitored front-end, backend, and production applications, performing functional and technical analysis to identify issues and maintain system stability.
- Took ownership of L2 incidents, performing Root Cause Analysis (RCA), troubleshooting, resolution, validation, and timely closure.
- Monitored batch jobs using AutoSys and IBM TWS (Tivoli Workload Scheduler), troubleshooting job failures, delays, dependencies, and batch processing issues.
- Performed database analysis and reporting, generated batch status reports, and troubleshot file transfer issues including FTP uploads and client file delivery.
- Managed Incident, Problem, and Change Management, including change evaluation, risk assessment, impact analysis, documentation, approval, and implementation.
- Coordinated with Development, QA, Product Support, Infrastructure, and business teams during incidents, production deployments, releases, and complex multi-system issues.
- Managed escalations, incident backlogs, customer grievances, and stakeholder communication, ensuring timely follow-up, resolution, and customer satisfaction.
- Followed and maintained SOPs, BAU processes, operational procedures, and support documentation to improve

service consistency and efficiency.
- Partnered with Product Support teams to identify application quality issues, analyze customer feedback, and implement continuous process improvements.
- Supported volume/load testing and analyzed application performance to identify bottlenecks and validate system stability under high workloads.
- Created team roster plans and workload allocation based on capacity, priority, skill sets, and 24x7 support requirements.
- Monitored team productivity, SLA, KPI, and performance metrics, preparing reports and identifying opportunities for operational improvement.
- Conducted knowledge-sharing, mentoring, and coaching sessions to improve technical, product, and communication skills across the support team.

Core Skills

- Production Support & L2 Operations
- Incident, Problem & Change Management (ITIL)
- CI/CD & Version Control
- SQL/PLSQL & Data Analysis for Production Systems
- System Optimization & Performance Tuning
- Unix/Linux Administration & Shell Scripting
- Application Support
- Major Incident Management, RCA
- Batch Job Scheduling & Automation
- Monitoring & Observability
- Cloud & AWS Services
- Stakeholder Communication & Incident Management Leadership

Functional Skills

- Production Support Operations
- Incident Management
- Change Management
- Problem Management
- SLA Management
- Release Coordination
- Automation and Process Improvement
- Application Support and Maintenance
- Cross-Team Coordination
- Documentation and Reporting

Achievements

- Awarded “Best Performer of the Quarter” for proactively resolving high-priority production incidents and consistently maintaining exceptional system uptime.
- Recognized by leadership for optimizing monitoring processes, reducing alert noise by 25% and improving operational efficiency while minimizing false positives.
- Received client commendation for ensuring seamless EOD/SOD batch operations and executing zero-impact production releases during peak periods.
